EDUCATION

Rajalakshmi Institute of Technology, Expected May 2028
Bachelor of Engineering in Computer Science and Engineering,
CGPA: 7.77

TECHNICAL SKILLS

Software/Tools: Github, Postman, Tableau, Linux
Programming Languages: Java, Python

PROJECTS

Digital Subsidy and Grant Administration Platform July - Sept 2026

- Digitized government subsidy workflows, eliminating paper-based processes and reducing application processing time.
- It follows a Three Staged Disbursement of Funds for the Beneficiary and at each stage of Disbursement The Beneficiary should submit an Utilization Proof which has to be verified by the Finance Officer and after the approval the Finance Officer Decides whether to Release the next Stage of funds or to Stop the Disbursement Process.

Community Hero june 2026

- Developed an Application to Resolve Grievances in a Community.
- Automated complaint lifecycle management, enabling users to submit and track grievances digitally while providing resolving officers centralized tools to review, update, and settle pending issues.

EXPERIENCE

Infosys
Java Developer Intern July - Sept 2026

- Worked in The Project "Digital Subsidy and Grant Administration Platform" and Developed the Core Disbursement and Milestone Tracking Module of the Application.
- Implemented Milestone Tracking with due-date calculation, compliance reminder with Milestone wise amount breakdown.

1M1B(One Million for One Billion) Green Skills Academy Dec 2024 - Feb 2025
Green Intern

- Conducted a comprehensive campus-wide sustainability audit, tracking and analyzing annual resource metrics across energy consumption, waste generation, and water usage.
- Designed interactive Tableau dashboards to visualize annual resource consumption, transforming raw environmental data into actionable sustainability insights for stakeholders.

ACHIEVEMENTS

Prompt to Page Hackathon Jan 2026
1st Place out of 100 Teams

- Developed Smart RIT, a comprehensive campus portal designed to enhance student life by automating document printing services, streamlining institutional grievance resolution, and facilitating peer-to-peer team matchmaking.

TechSprint 6.0 Hackathon March 2026
3rd Place among 75 Teams

- Developed AI-based Disease Outbreak Prediction System for Predicting Disease outbreaks.
